

# Point-to-Point and Point to Multi-Point Ethernet

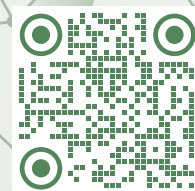

Adaptive, scalable connectivity. SLA-backed. 24x7 NOC monitoring.

Discover the power of our Carrier Ethernet services. Benefit from granular QoS options, low-jitter performance, and rapid provisioning. Whether it is about interconnecting data centers, branching out with EVPL, or deploying point-to-point circuits via EPL, this service aligns with your dynamic demands. Continuous monitoring and swift issue resolution are standard, thanks to our 24x7 NOC and local technicians.

## Speeds

25Mbps  
to 10Gbps

## Features:

- Dedicated Access - Your bandwidth connection is not shared, giving you reliably fast access between your facilities.
- Synchronous Upload and Download Speeds - Internet upload and download speeds are the same, enabling the consistent access performance needed for online transactions to be completed quickly.
- Bandwidth Scalability - Bandwidth can be increased to up to 10Gbps speeds, so there is plenty of room to increase bandwidth as your Internet access needs grow.
- Data travels securely within a Layer 2 dedicated point-to-point connection.
- QoS and VLAN support - Allows for differentiation between the customer's traffic flows during periods of network congestion to ensure delivery of real-time or mission-critical traffic ahead of lower priority traffic.
- Multi-Site Support - Service can connect multiple sites to bring current and future locations online.
- Carrier-Class Service Level Agreement (SLA).

Essential for applications like:

- **ERP systems across multiple sites**

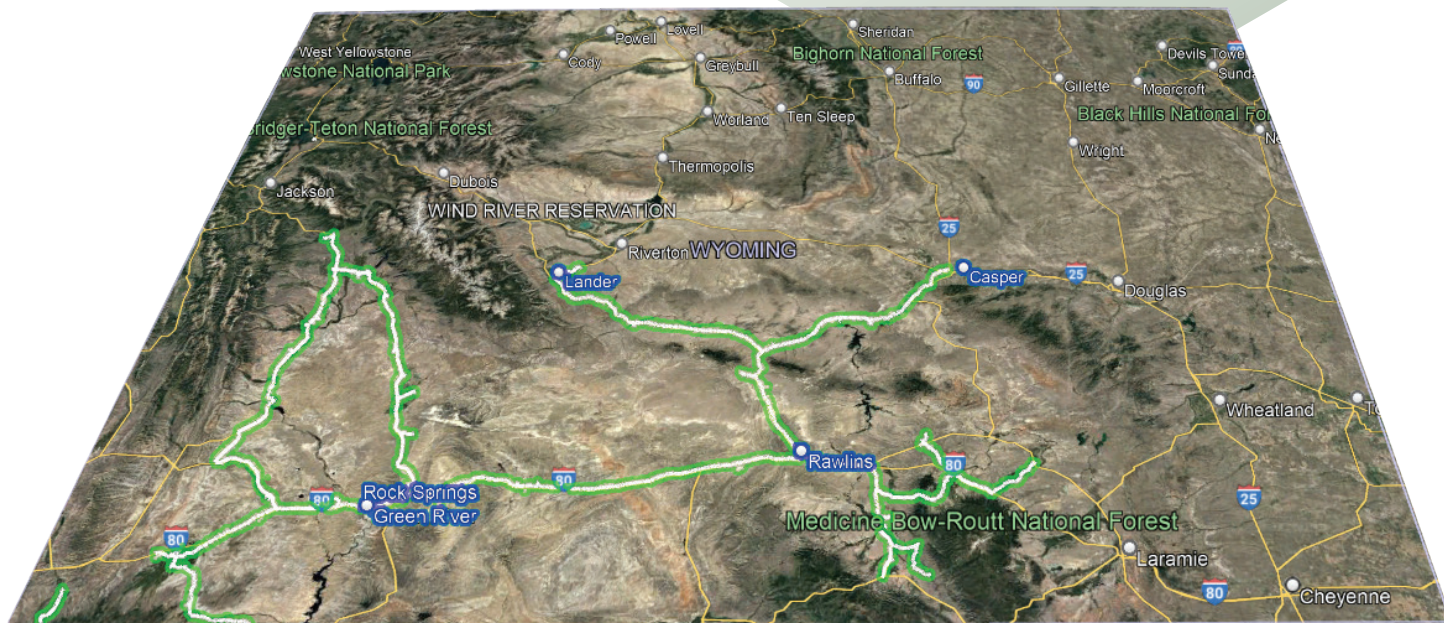

- **Data replication**

- **VoIP**

- **Extending LANs**

- **Security systems**

- **Support applications where performance is imperative.**

Available Across Union's Fiber Network
